Academic Year: 2026–2027

1. INTRODUCTION

Web development is the process of creating websites using programming languages and web technologies such as HTML and CSS.

This Activity-Based Learning assignment focuses on designing and developing three different websites using HTML and CSS. The selected projects are an Online Learning Platform, a Travel Agency Website, and a Bakery and Cake Shop Website.

The websites are designed with different sections, navigation menus, images, cards, information and responsive layouts.

2. OBJECTIVES OF THE ASSIGNMENT

- To understand the basic concepts of web development.
- To learn how to create webpages using HTML.
- To understand how CSS is used to design websites.
- To create attractive and user-friendly website layouts.
- To practise HTML elements, forms, tables, links and images.
- To understand CSS Grid, Flexbox and responsive design.
- To develop practical website development skills.
- To organize and maintain project files properly.

3. SOFTWARE AND TECHNOLOGIES USED

1. HTML (HyperText Markup Language)

HTML is used to create the structure of webpages. It provides headings, paragraphs, images, links, forms and different sections.

2. CSS (Cascading Style Sheets)

CSS is used to design webpages. It controls colours, fonts, spacing, layouts, borders, animations and responsive designs.

3. Visual Studio Code

Visual Studio Code is the code editor used to write and edit HTML and CSS files.

4. Google Chrome

Google Chrome is used to open, view and test the developed websites.

5. GitHub

GitHub is used to store and manage project files and share the completed assignment repository.

4. CASE STUDY 1 – ONLINE LEARNING PLATFORM INTERFACE

4.1 Problem Statement

Develop an online learning platform containing course categories, video lesson previews, instructor profiles, course descriptions, learning objectives and enrollment buttons. The website should have course cards and learning progress indicators.

4.2 Objective

To develop an educational website where students can explore different courses, view instructor details and understand course information.

4.3 Technologies Used

- HTML
- CSS
- Visual Studio Code
- Google Chrome

4.4 Features Implemented

1. Home section with a welcome message.

2. About Us section with platform information.
3. Course categories such as Programming, Artificial Intelligence, Web Development and Data Science.
4. Popular courses such as Python, Java and HTML/CSS.
5. Instructor profiles.
6. Learning objectives.
7. Sample course progress indicators.
8. Enrollment navigation buttons.
9. Contact information.

4.5 Implementation

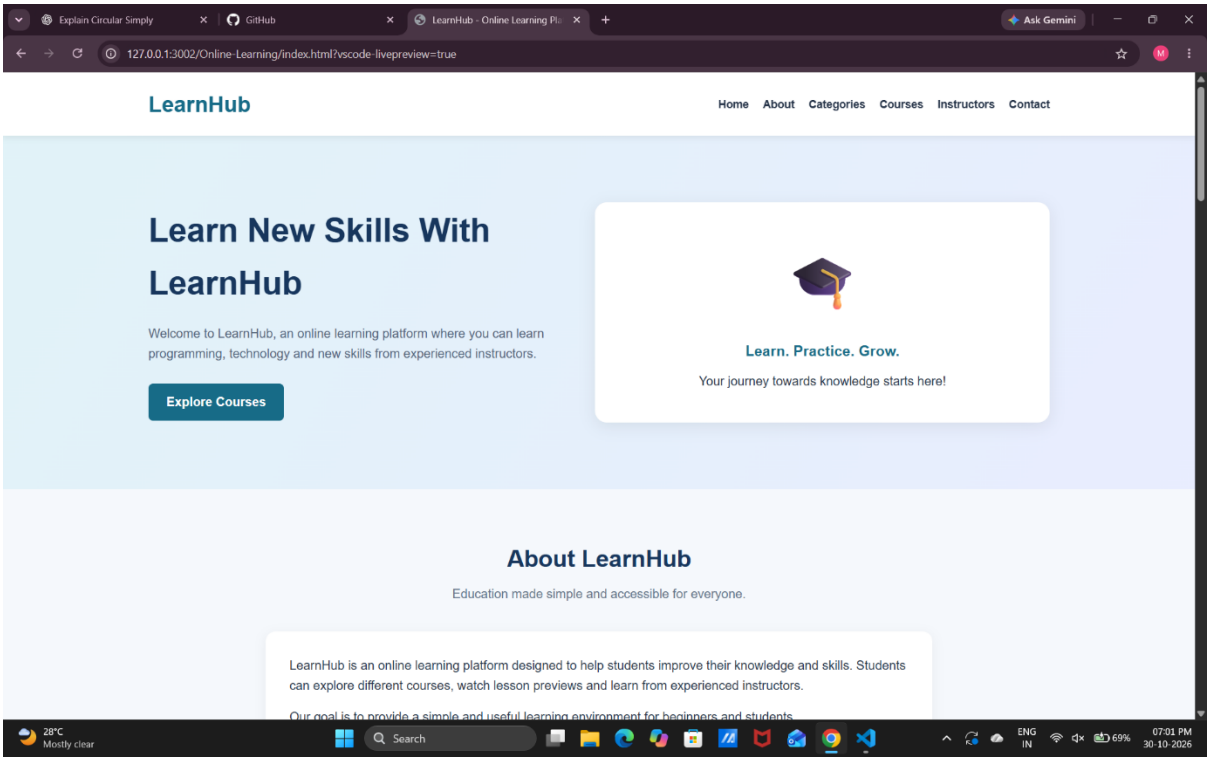

The website was developed using HTML to create the webpage structure and CSS to design the navigation bar, course cards, instructor sections, progress bars and other elements.

CSS Grid, Flexbox and media queries were used to organize the content and adjust the layout for different screen sizes.

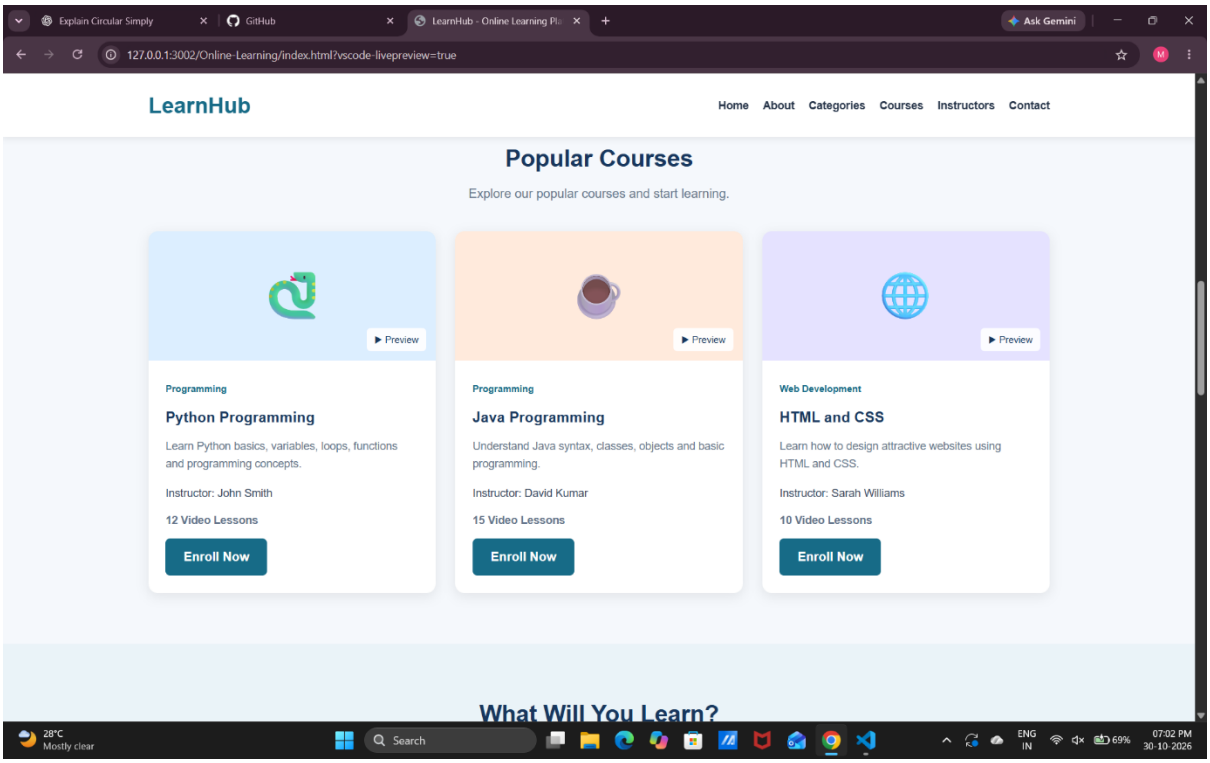

4.6 Output Screenshots

Insert the following screenshots of your completed website:

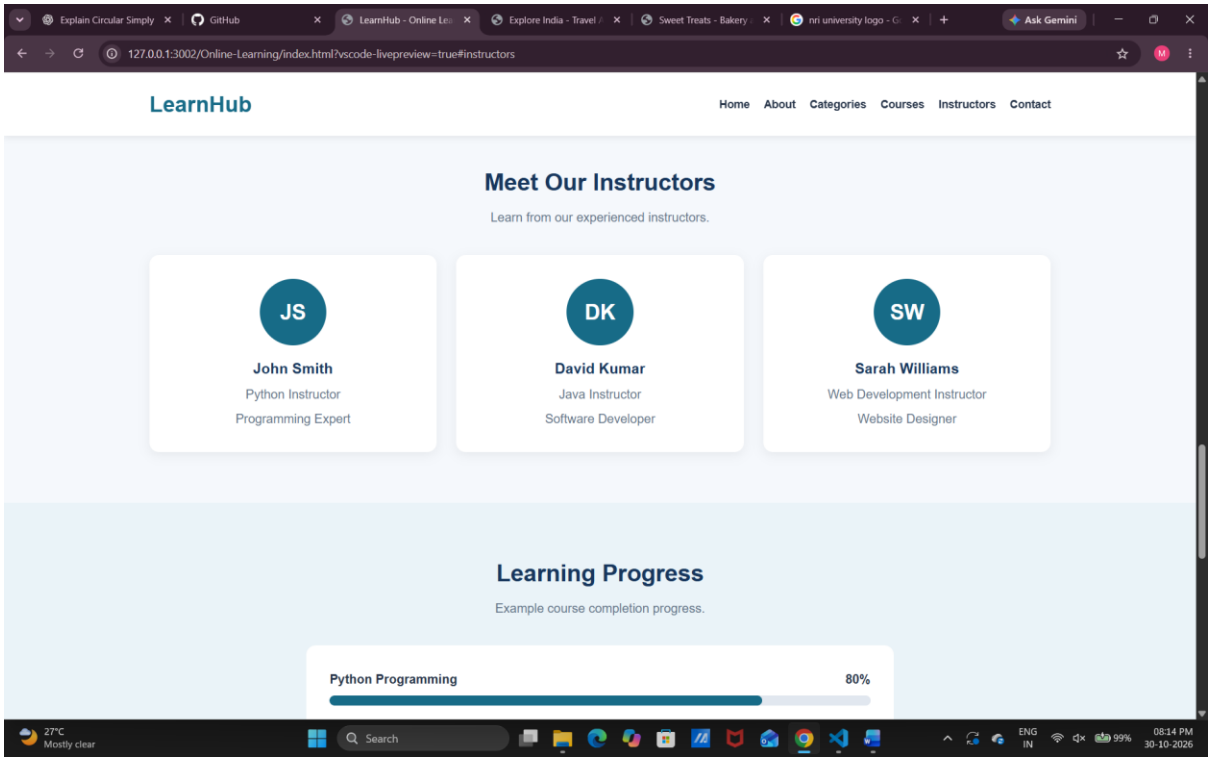

- Screenshot 1: Home Page

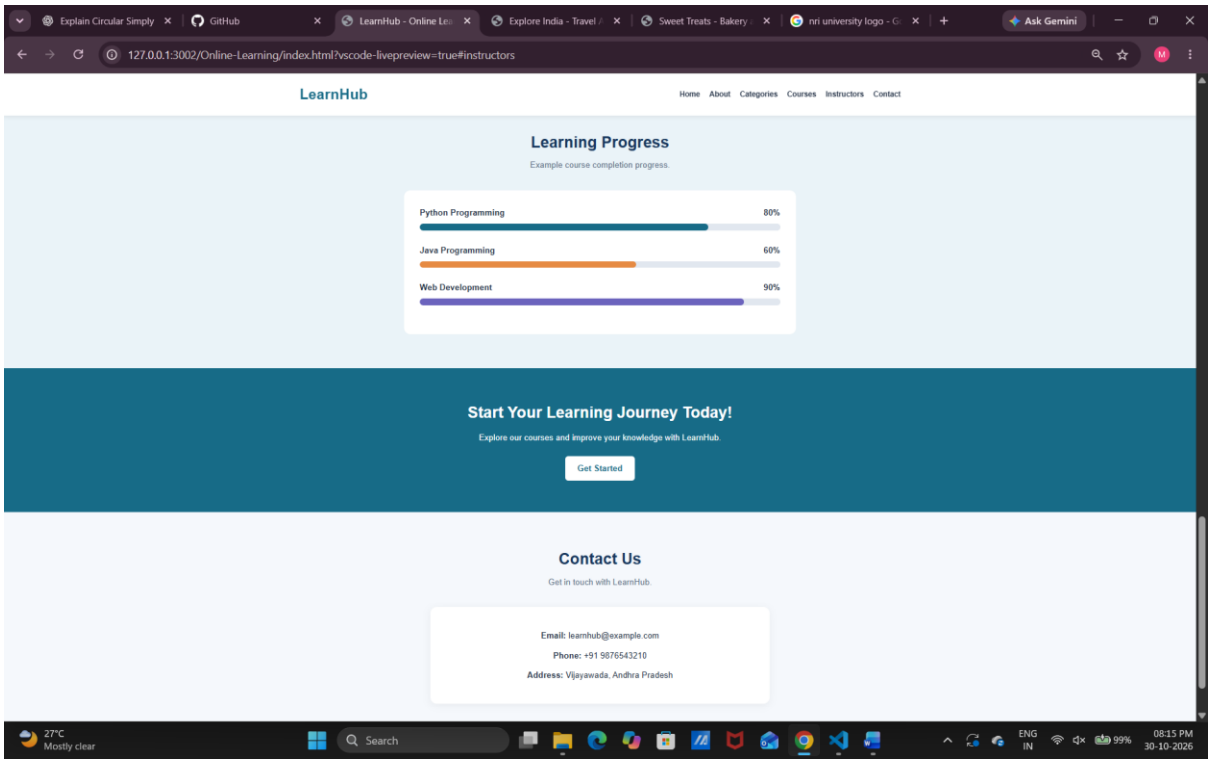

- 

- Screenshot 2: Course Categories and Popular Courses

- 

- Screenshot 3: Instructor Profiles

- 

- Screenshot 4: Learning Progress and Contact Section
- 

4.7 Result

The Online Learning Platform website was developed using HTML and CSS. It displays courses, categories, instructor information, learning objectives and sample progress indicators.

5. CASE STUDY 2 – TRAVEL AGENCY WEBSITE

5.1 Problem Statement

Develop a travel agency website presenting holiday packages, popular destinations, trip durations, prices, itineraries and travel inquiry forms. The website should use destination cards, attractive hero images and responsive layouts.

5.2 Objective

To develop a travel website where visitors can explore tourist destinations, view holiday packages and understand trip details.

5.3 Technologies Used

- HTML
- CSS
- Visual Studio Code
- Google Chrome

5.4 Features Implemented

1. Home section with a welcome banner.
2. About Us section.
3. Popular destinations such as Agra, Goa, Munnar and Jaipur.
4. Holiday package details.
5. Package prices and trip durations.
6. Three-day Goa travel itinerary.
7. Travel inquiry form.
8. Contact details and address.

5.5 Implementation

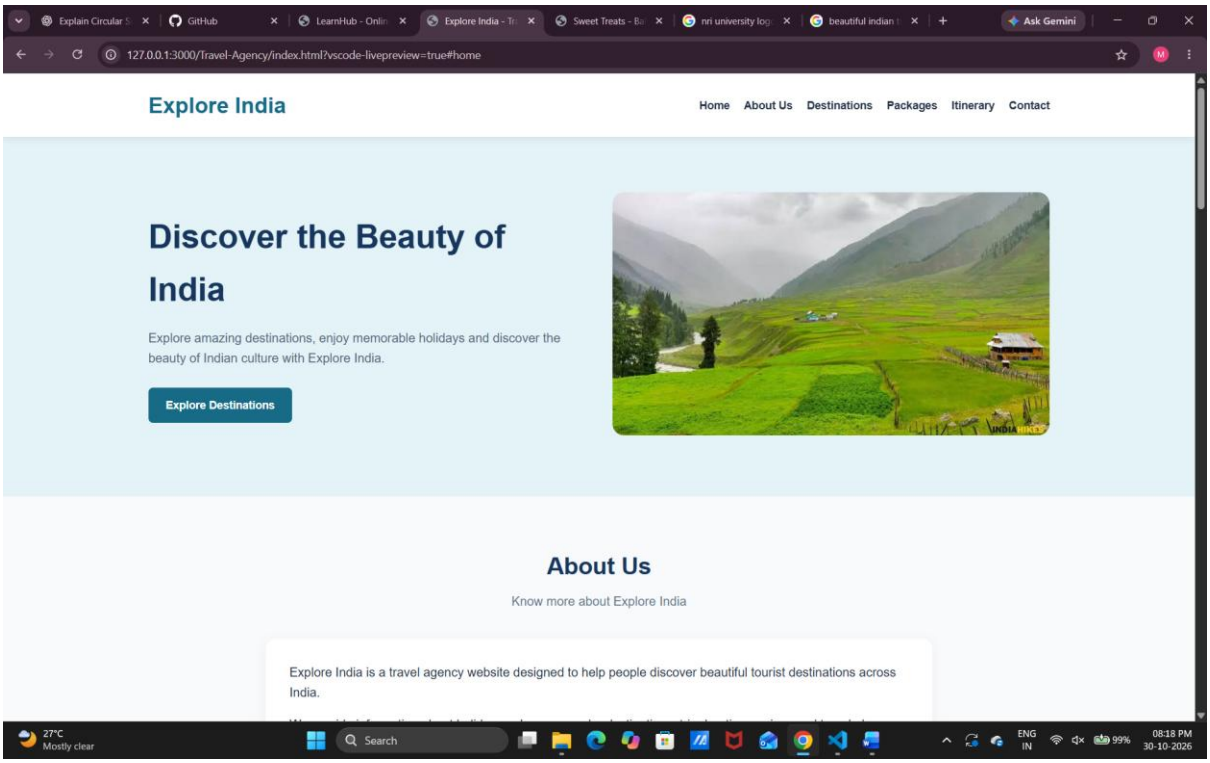

HTML was used to create the website structure, destination cards, package information and inquiry form.

CSS was used to design the navigation bar, destination images, package cards, itinerary sections and responsive layouts.

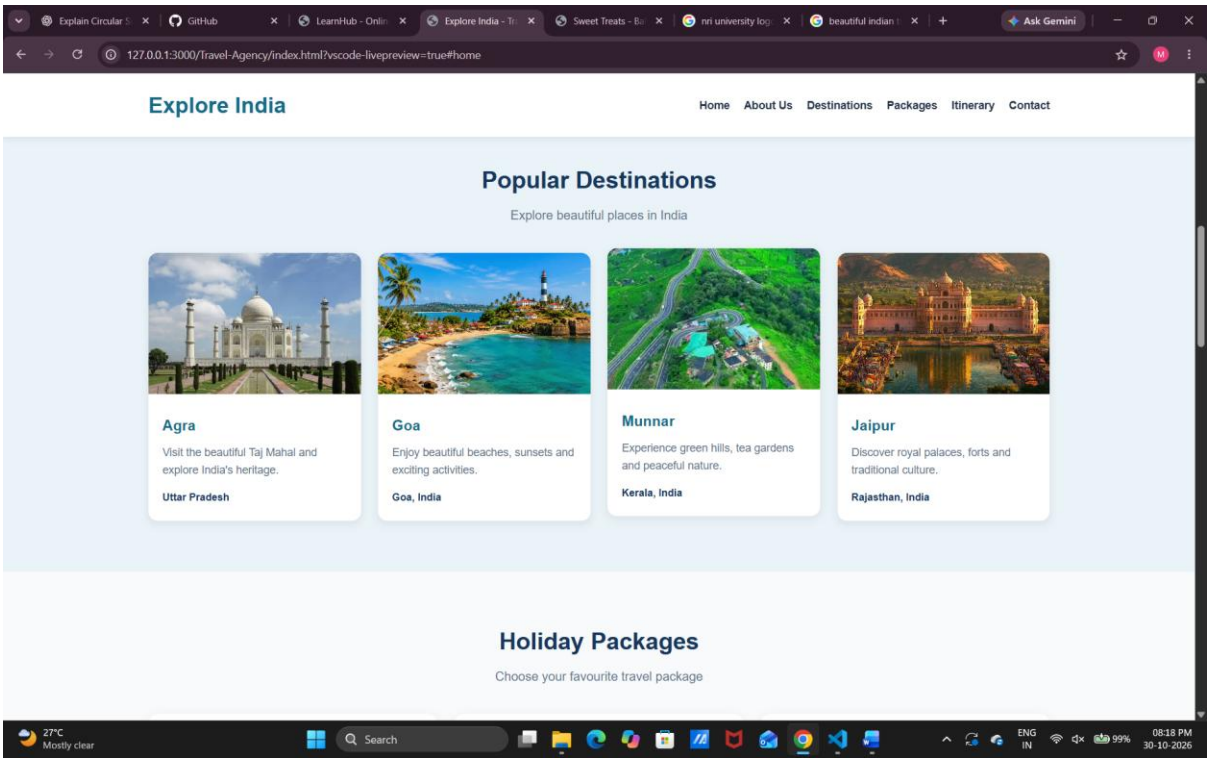

5.6 Output Screenshots

Insert the following screenshots of your completed website:

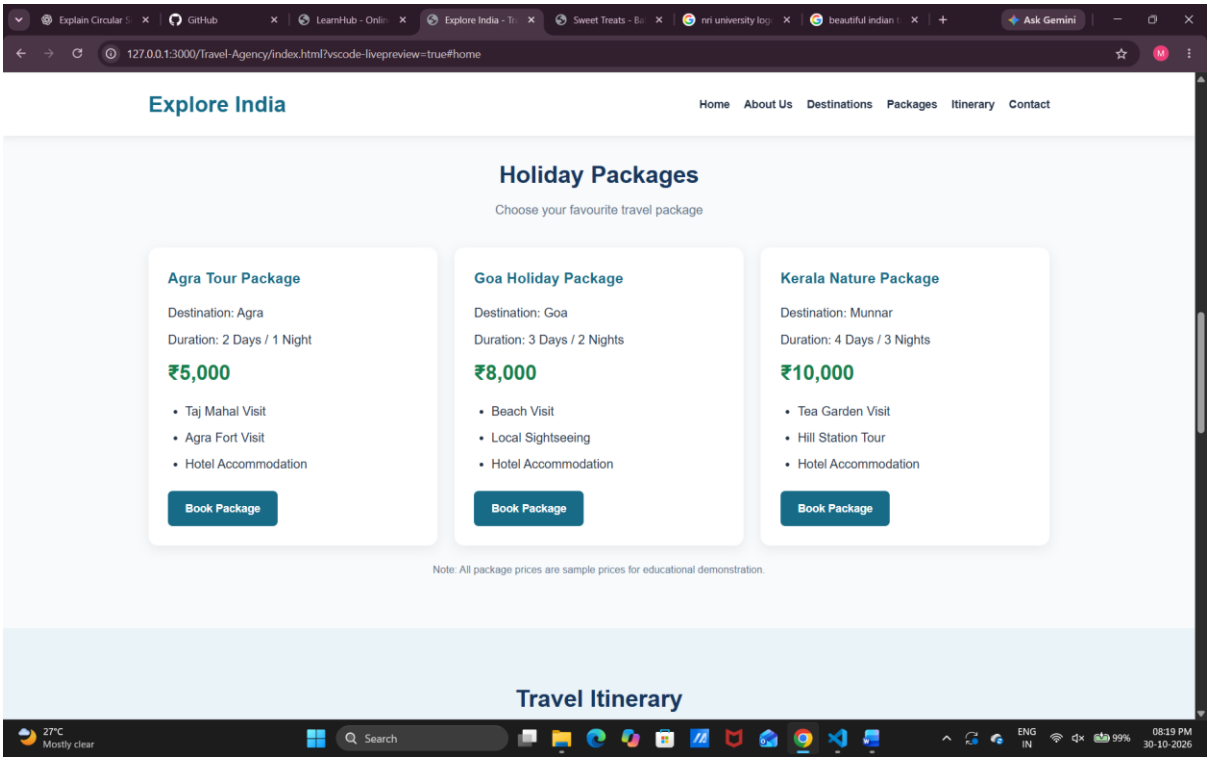

- Screenshot 1: Home Page

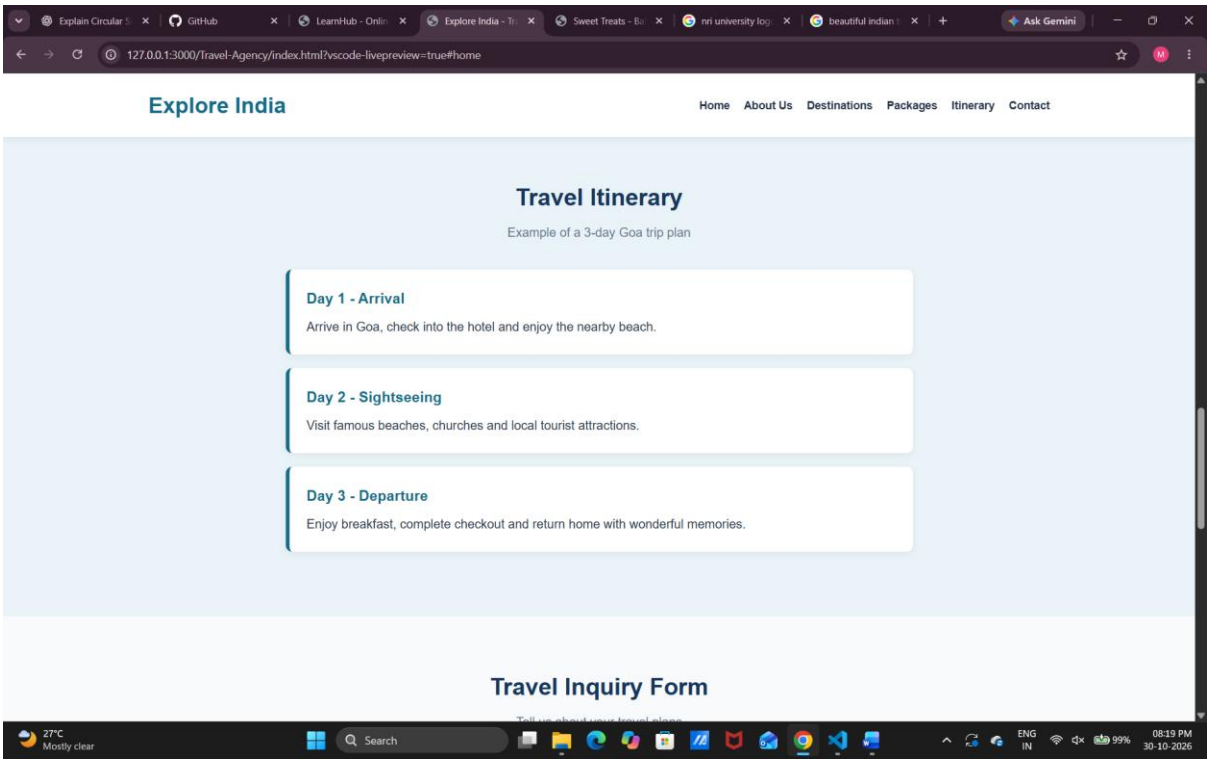

- Screenshot 2: Popular Destinations

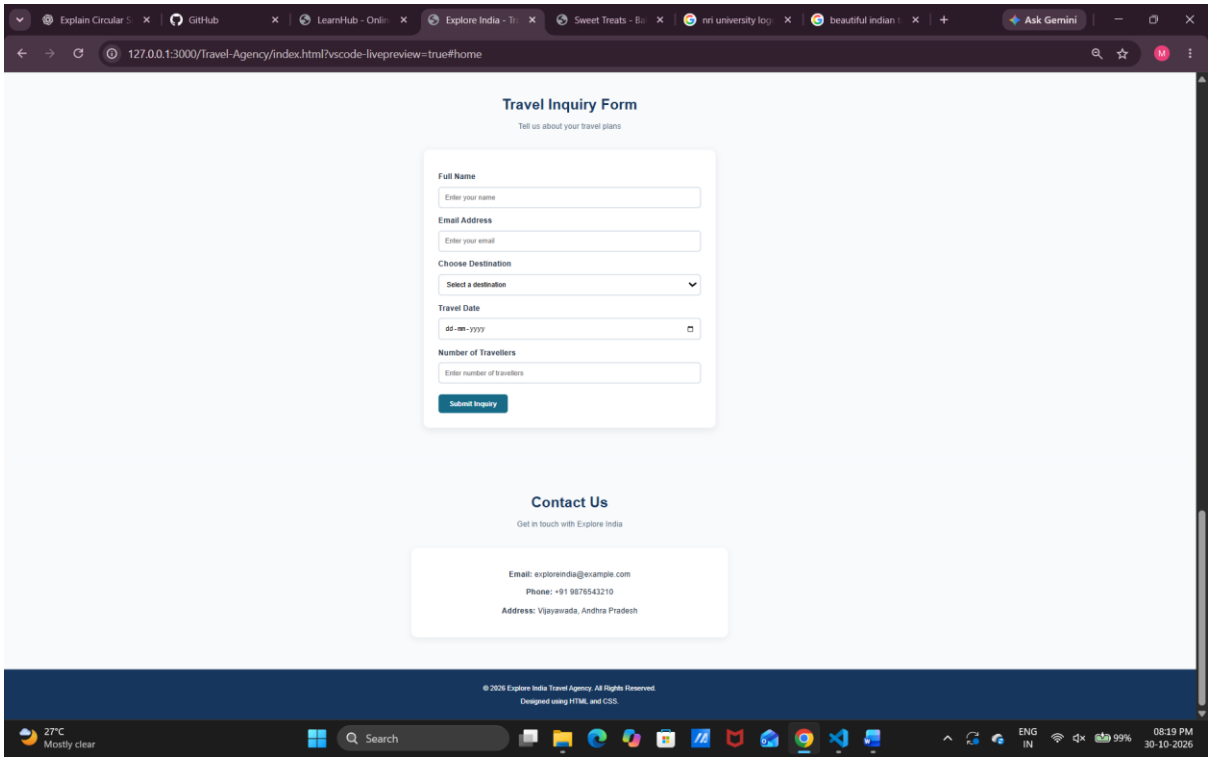

- Screenshot 3: Holiday Packages

- Screenshot 4: Travel Itinerary

- Screenshot 5: Travel Inquiry Form and Contact Section

- 

5.7 Result

The Travel Agency website was successfully developed using HTML and CSS. It displays tourist destinations, travel packages, trip details, an inquiry form and contact information.

6. CASE STUDY 3 – BAKERY AND CAKE SHOP WEBSITE

6.1 Problem Statement

Create a bakery website displaying cakes, pastries, cookies, custom cake designs, product prices, seasonal offers and store contact details. The website should use an attractive colour scheme and image galleries.

6.2 Objective

To develop a bakery website that displays different bakery products, their prices, special offers and contact information.

6.3 Technologies Used

- HTML
- CSS
- Visual Studio Code
- Google Chrome

6.4 Features Implemented

1. Home section with bakery introduction.
2. About Our Bakery section.
3. Different varieties of cakes.
4. Pastry products and prices.
5. Cookie products and prices.
6. Custom cake designs.
7. Special offers.
8. Bakery image gallery.
9. Contact details and opening hours.

6.5 Implementation

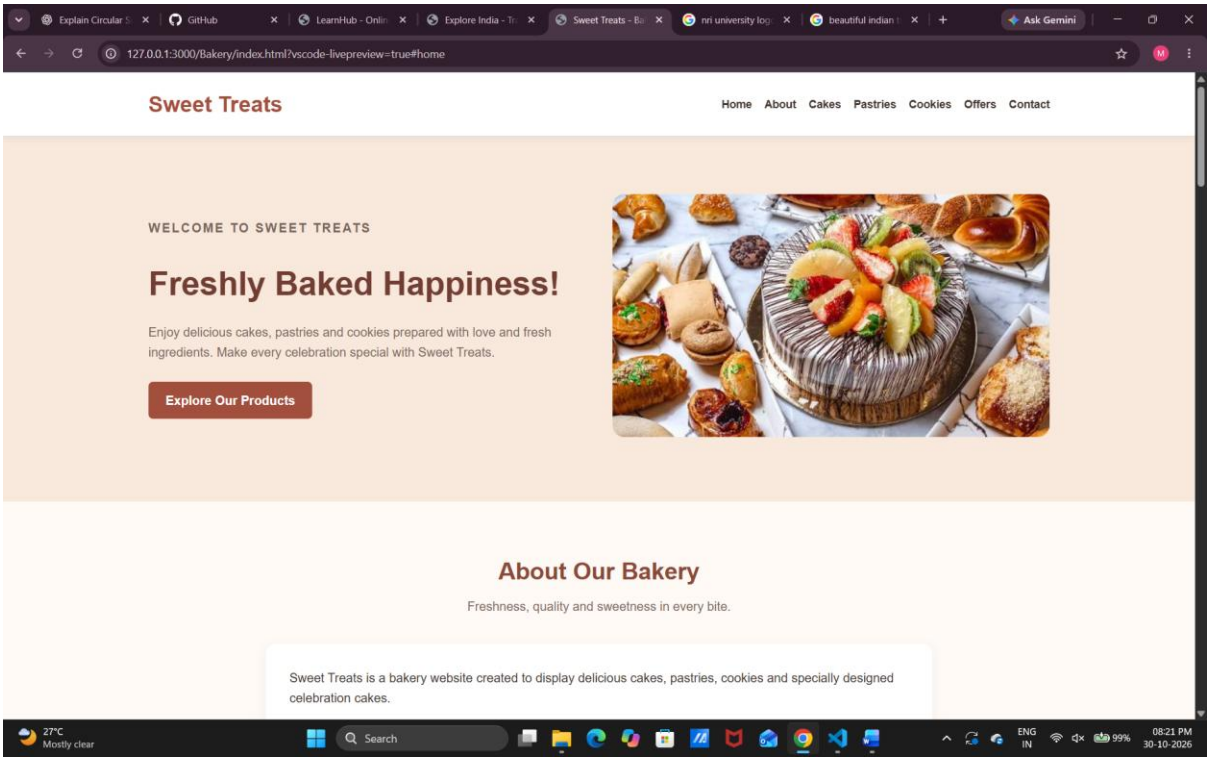

HTML was used to create the webpage structure, product sections, image galleries and contact information.

CSS was used to style the navigation menu, product cards, images, special offers and responsive layouts.

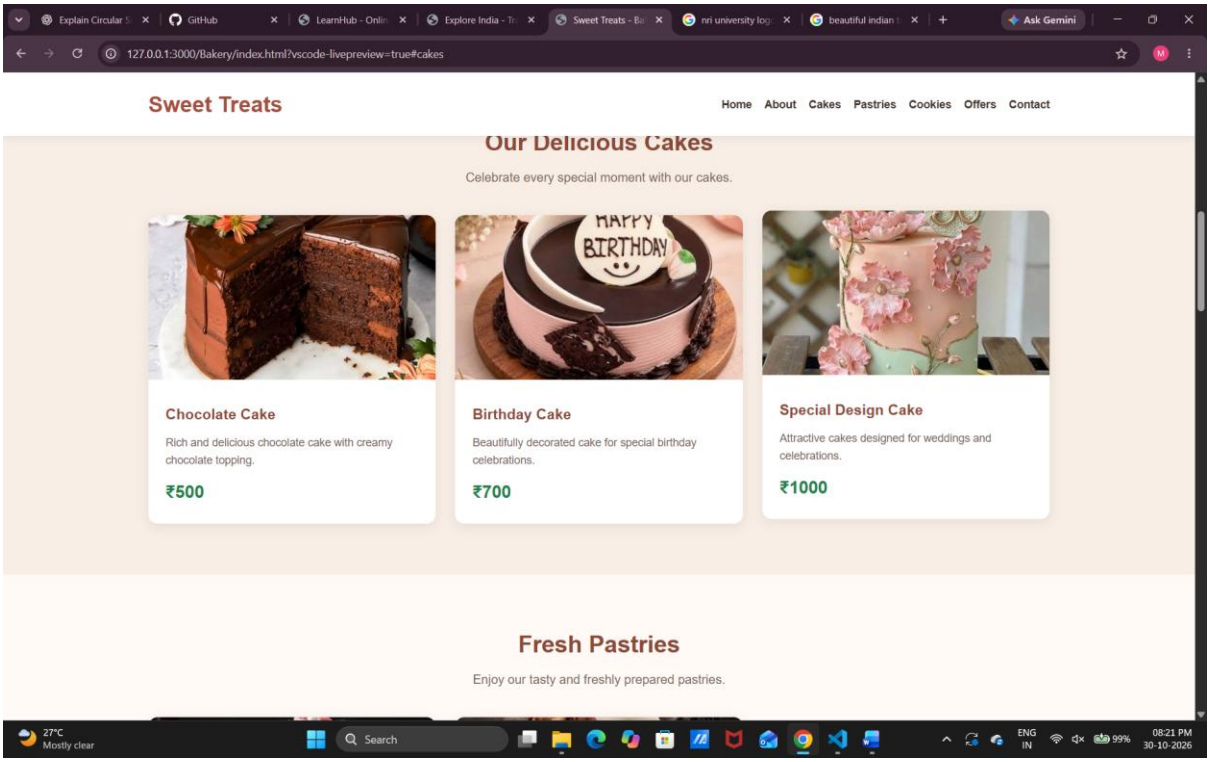

6.6 Output Screenshots

Insert the following screenshots of your completed website:

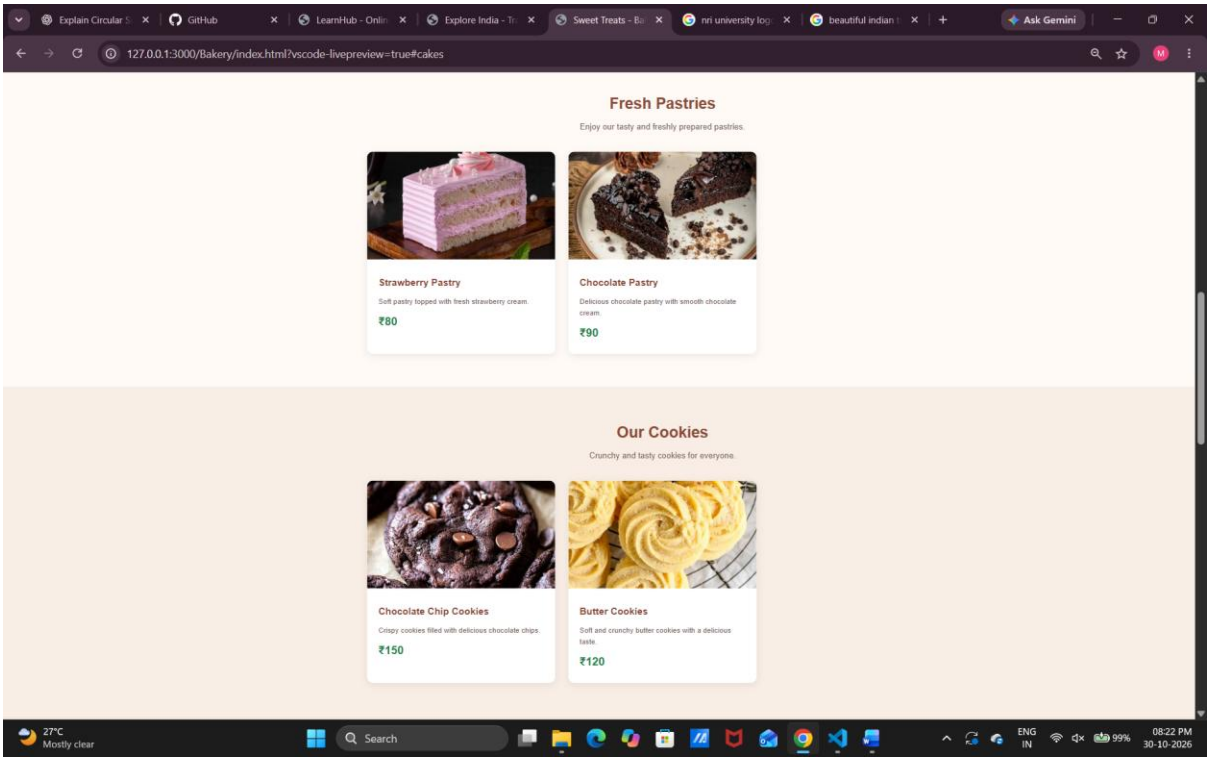

- Screenshot 1: Home Page

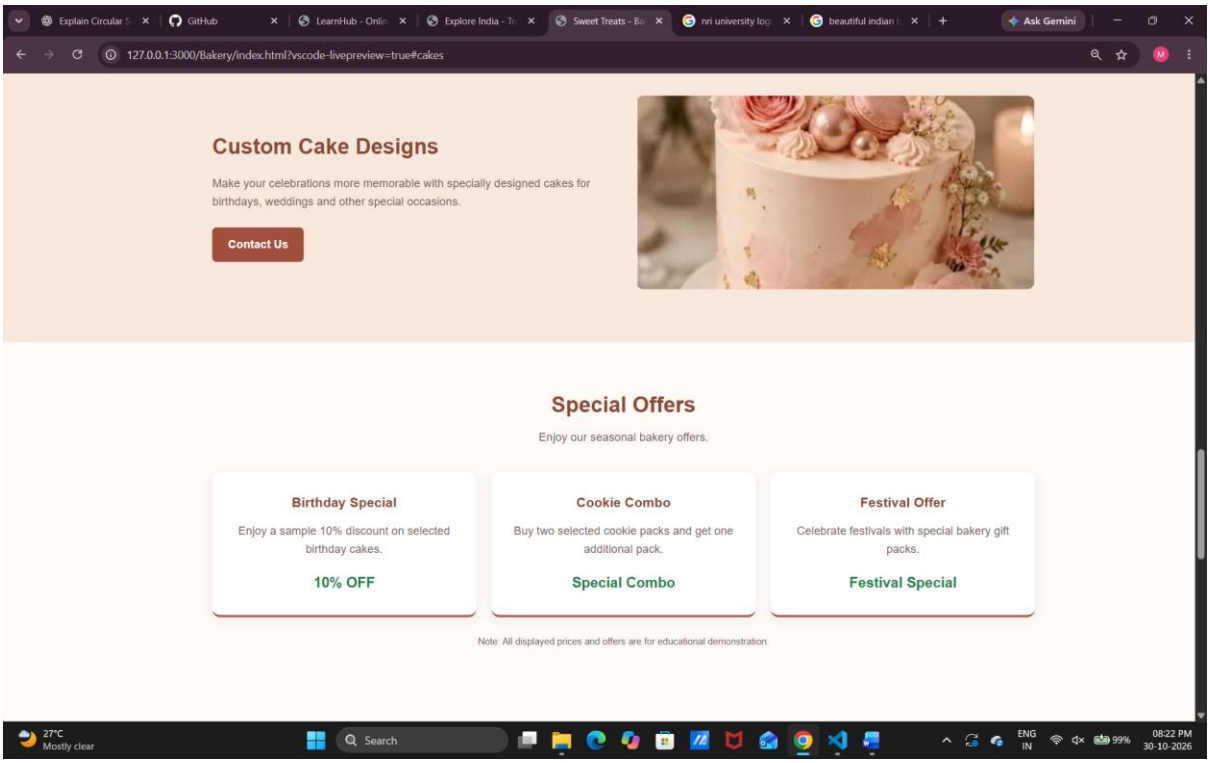

- Screenshot 2: Cakes Section

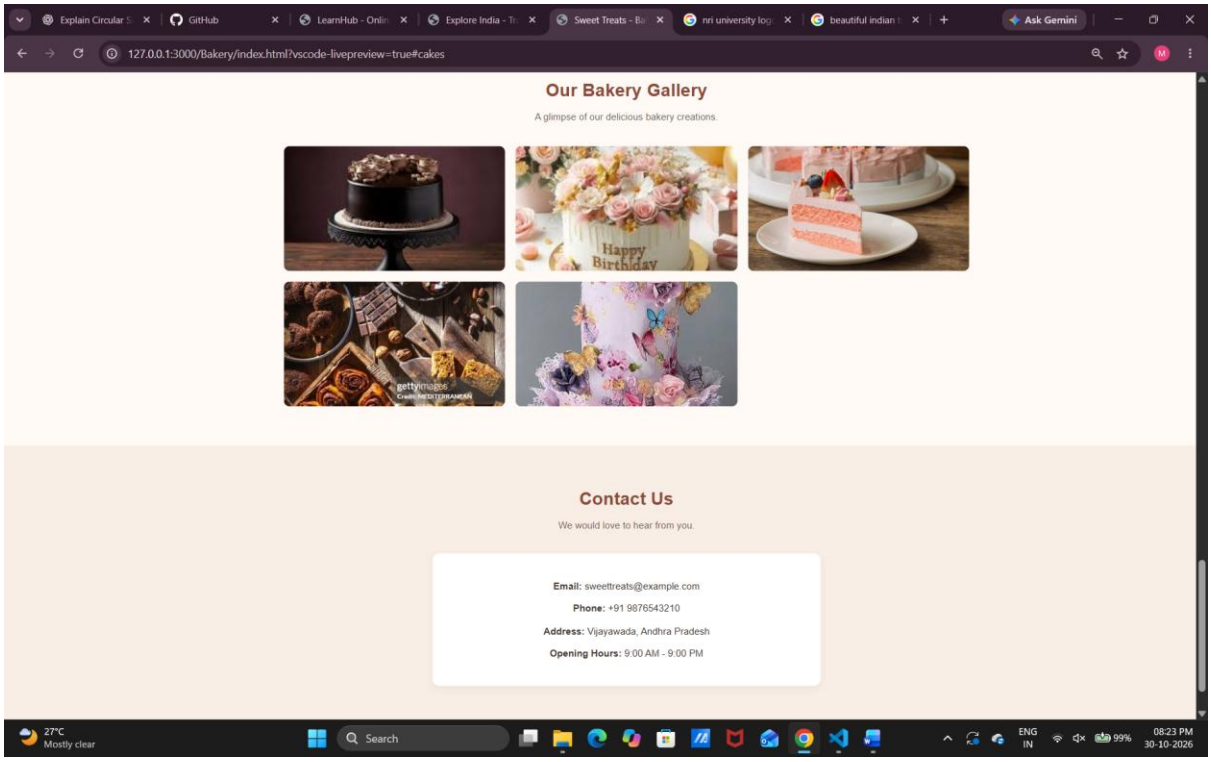

- Screenshot 3: Pastries and Cookies

- 

- Screenshot 4: Custom Cakes and Special Offers

- 

- Screenshot 5: Bakery Gallery and Contact Section

- 

6.7 Result

The Bakery and Cake Shop website was successfully developed using HTML and CSS. It displays different bakery products, prices, custom cake designs, seasonal offers and contact details.

7. TESTING AND RESULTS

All three websites were opened in Google Chrome for visual testing.

The following aspects were checked:

1. Navigation links between sections.
2. Display of headings and paragraphs.
3. Loading of images.
4. Display of product and course cards.
5. Proper arrangement of webpage sections.
6. Display of travel inquiry form.
7. CSS styling and spacing.
8. Responsive layout on different screen sizes.

Overall Result

Three websites were developed using HTML and CSS:

- Online Learning Platform Interface.
- Travel Agency Website.
- Bakery and Cake Shop Website.

The projects provided practical experience in webpage structure, styling, navigation, images, cards, forms and responsive layouts.

8. CONCLUSION

Through this Activity-Based Learning assignment, I developed three websites using HTML and CSS.

The Online Learning Platform helped me understand course cards, instructor sections and webpage layouts.

The Travel Agency Website helped me learn how to display destinations, holiday packages, travel itineraries and inquiry forms.

The Bakery and Cake Shop Website helped me understand product cards, image galleries, prices and special offers.

This assignment improved my practical knowledge of HTML and CSS. It also helped me understand website design, navigation, responsive layouts and project organization.
